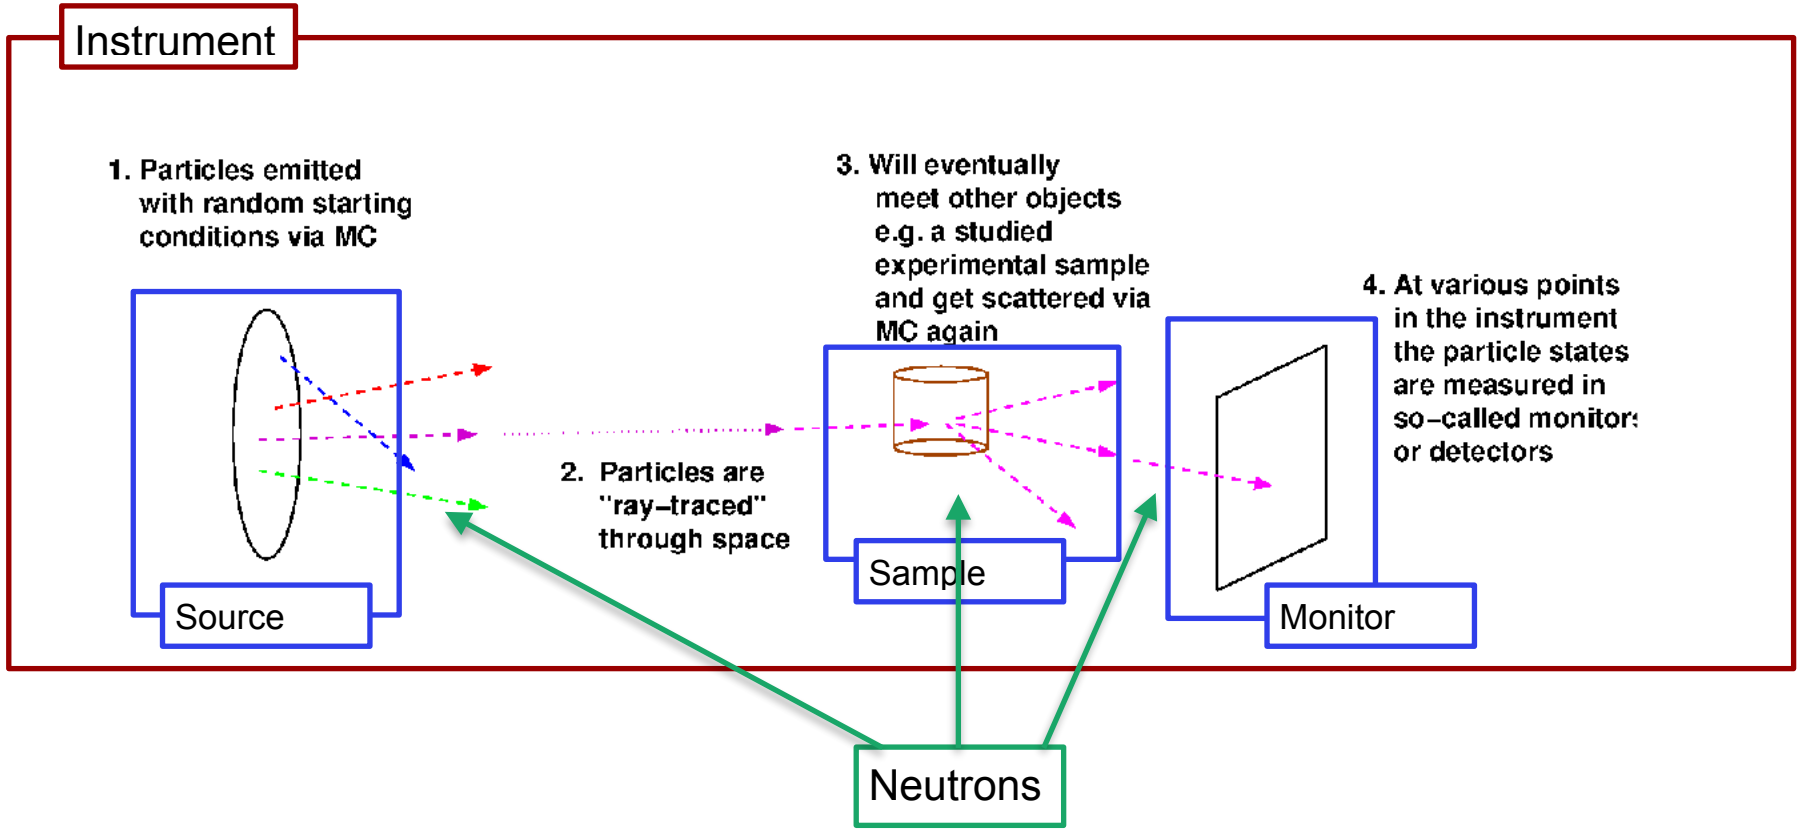
McStas Introduction

2021 Virtual ISIS McStas School, April 13th-15th 2021

Agenda

- A (very) brief introduction to McStas
- Components of neutron instruments
- How McStas works under the hood
- Components and instruments
- A demo

McStas is a Monte Carlo ray-tracer

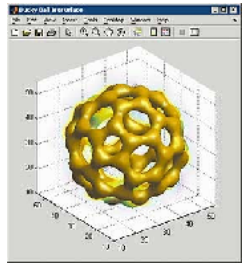


When to use Monte Carlo methods

Dimensionality of phase space must be large ($d > 5$)

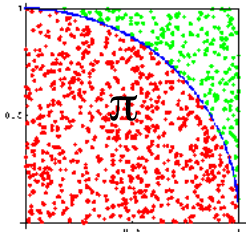
Overall complexity is beyond reasonable analytical methods

Each event can be computed easily and independently MC is the '*lazy guy*' method – think microscopic



Examples:

Estimate π from a circle/square ("*Buffon needle*")
Area under/inside a curve/volume (integration)
Molecular Dynamics
spin-system phase transitions (*Ising* model)
nuclear reactions
ray-tracing (light, particles)



Number of points for which
$\{ x^2+y^2 \leq 1, (x,y) \in [0,1] \}$
Ratio circle/square → $\pi/4$

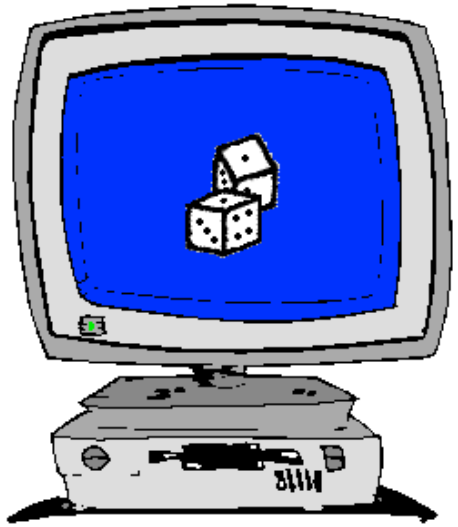
How to implement Monte Carlo methods ?

Good random generator:

from thermal electronic noise (hardware)

or quasi-random generators => *quasi*-Monte-Carlo

We encounter a probability $0 < p < 1$.



Crude Monte-Carlo (yes/no choice):

We shoot *n* events $\xi \in [0,1]$

We keep events that satisfy $\xi < p$

***np* events low statistics**

Importance sampling (fuzzy choice – event weighting):

Keep *n* events, no more random number...

But associate a weight *p* to each of them (we set $\xi = p$)

Retain statistical accuracy ($1/\div n$)

Origin of Monte Carlo methods

First application using computers:

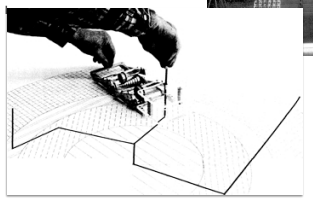
Metropolis, Ulam and Von Neumann at Los Alamos, 1943

Neutron Scattering and Absorption in U and Pu, Origin of MCNP

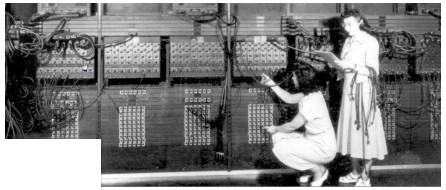
Name:

Monte Carlo casino, a random generator (Ulam's father played poker)

Bradbury Science Museum, LANL



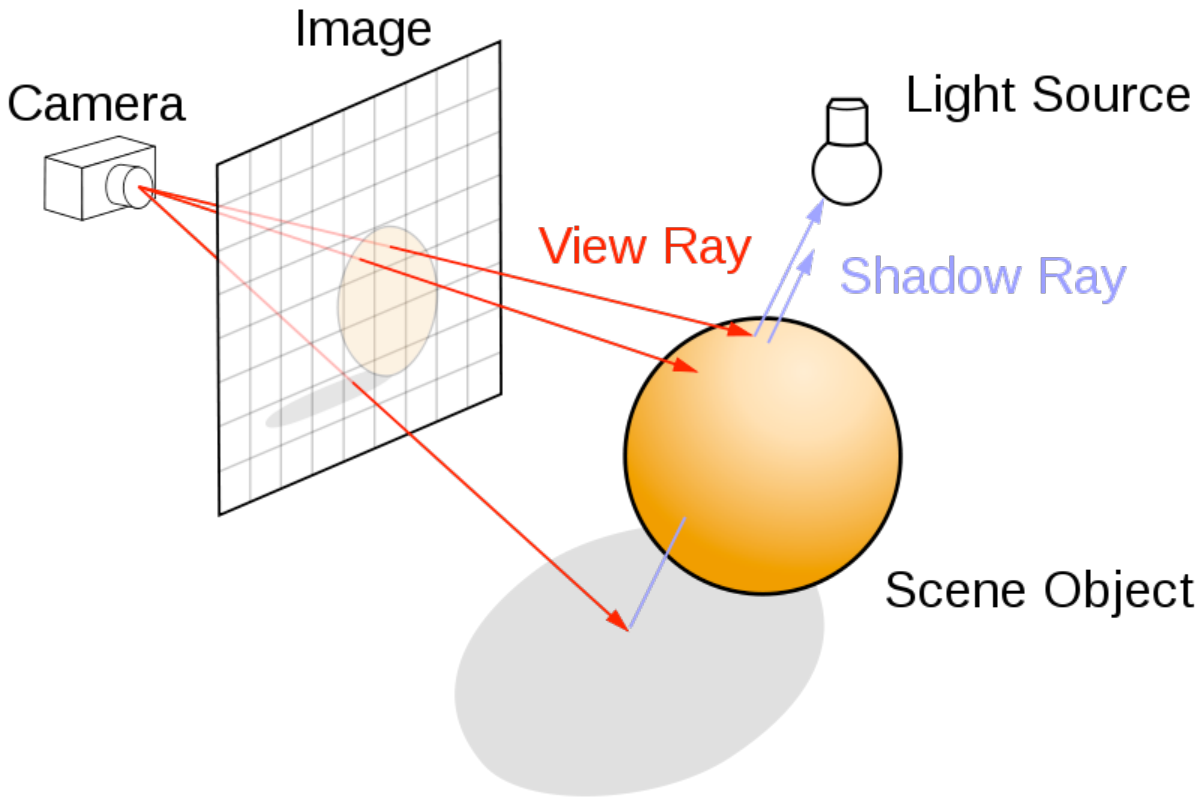
FERMIAC



ENIAC

US Army BRL → UPENN

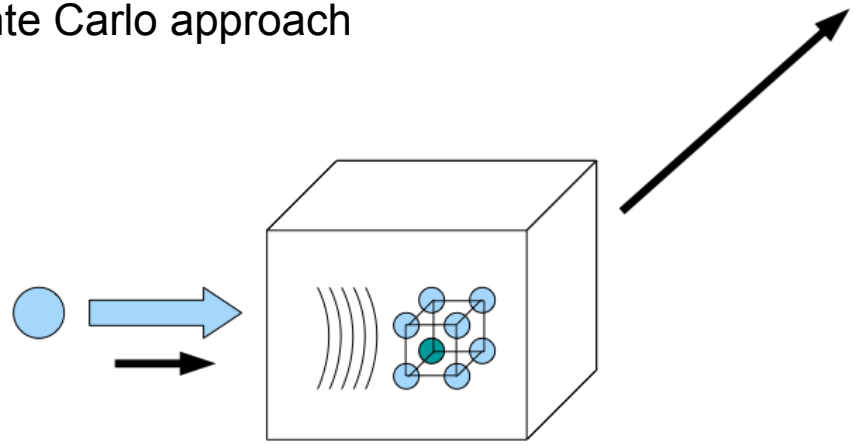
Ray-tracing methods



- When neutrons move in “free space”, we use ray-tracing - but in most cases in direction source -> detector
- Of course parabolas rather than straight lines are uses to implement gravity

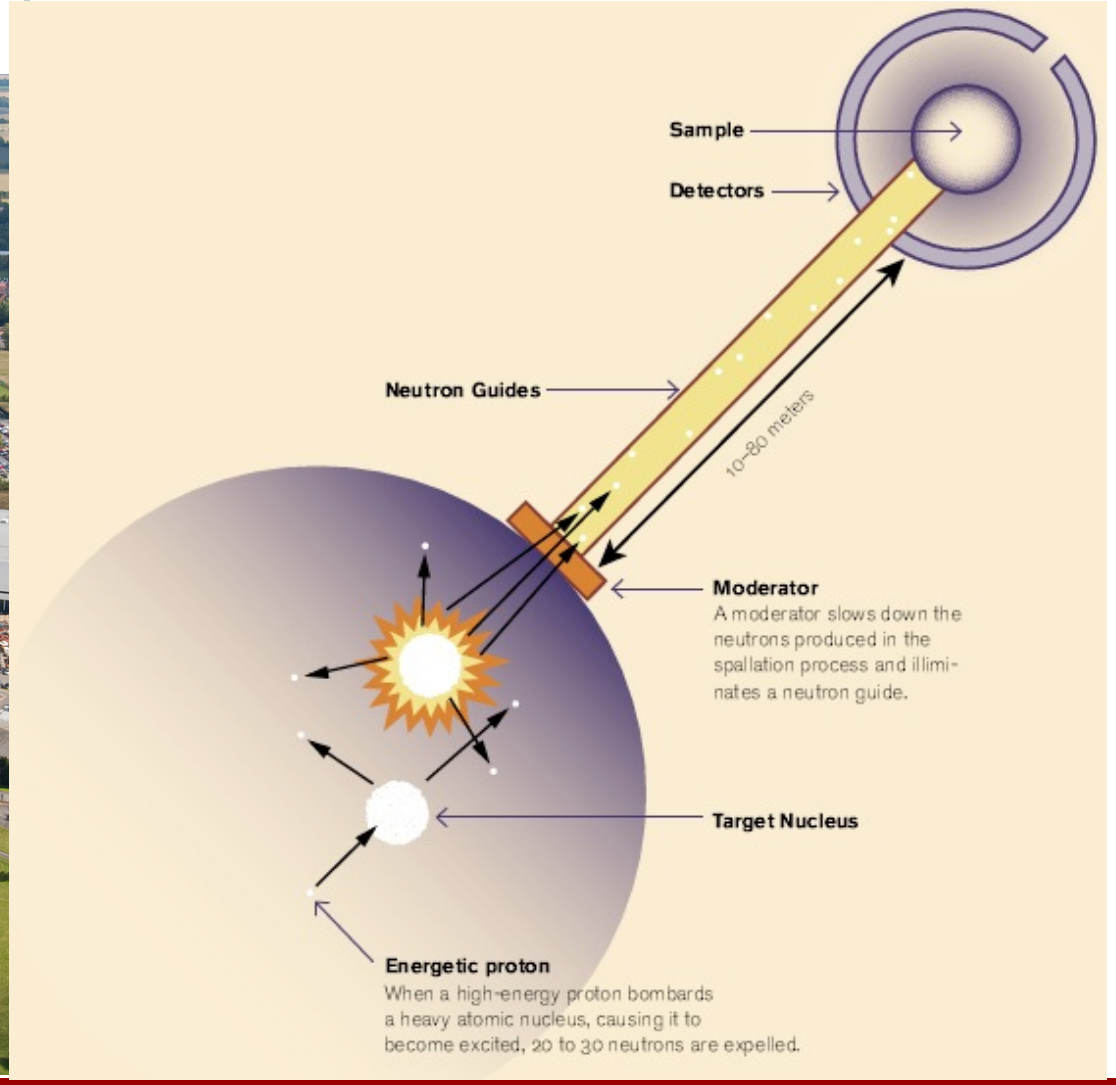
Elements of Monte-Carlo raytracing

- Instrument Monte Carlo methods implement coherent scattering effects
- Uses deterministic propagation where this can be done
- Uses Monte Carlo sampling of “complicated” distributions and stochastic processes and multiple outcomes with known probabilities are involved
- - I.e. inside scattering matter
- Uses the particle-wave duality of the neutron to switch back and forward between deterministic ray tracing and Monte Carlo approach

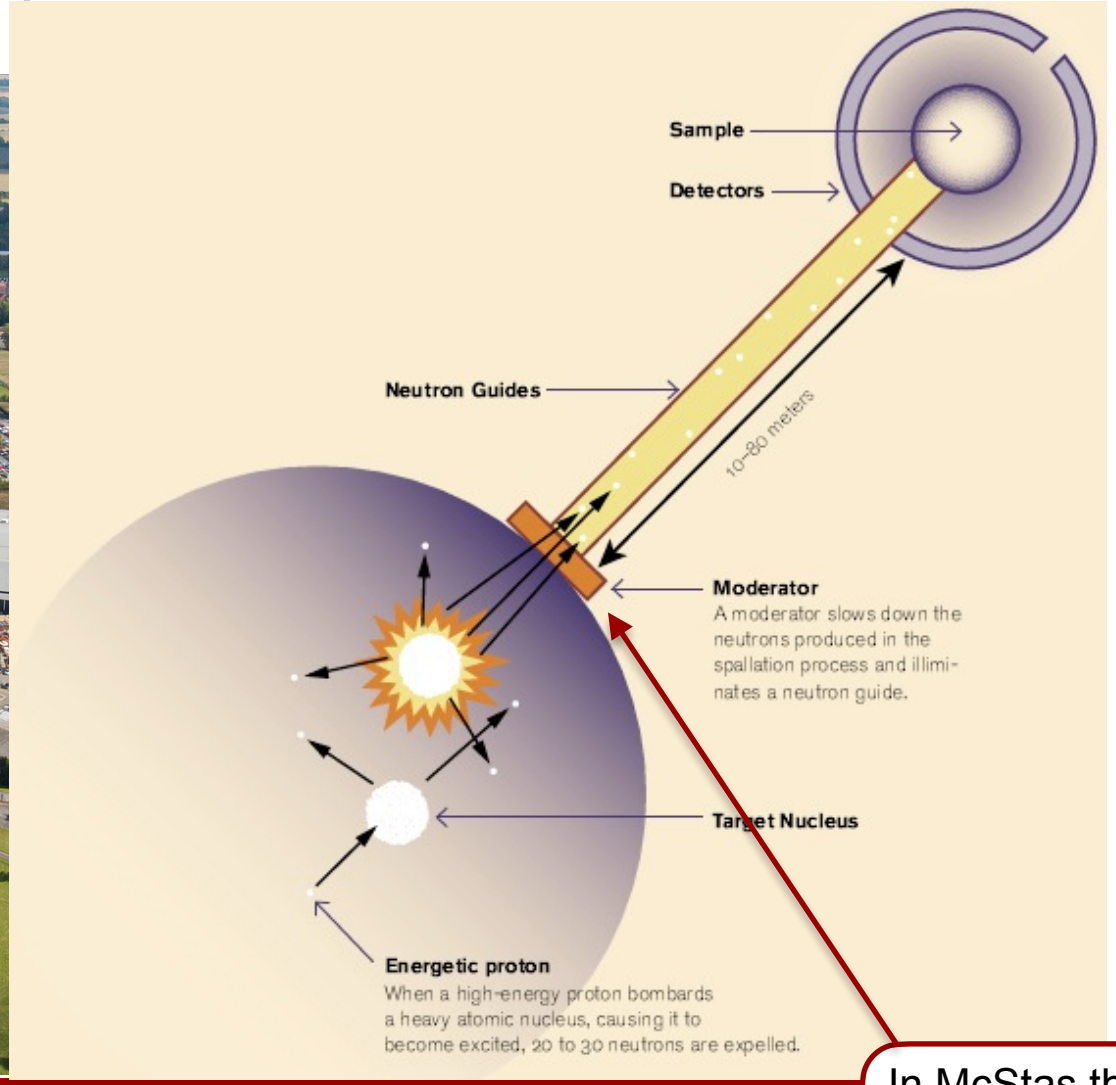


- Result: A realistic and efficient transport of neutrons in the thermal and cold range

Components of neutron instruments

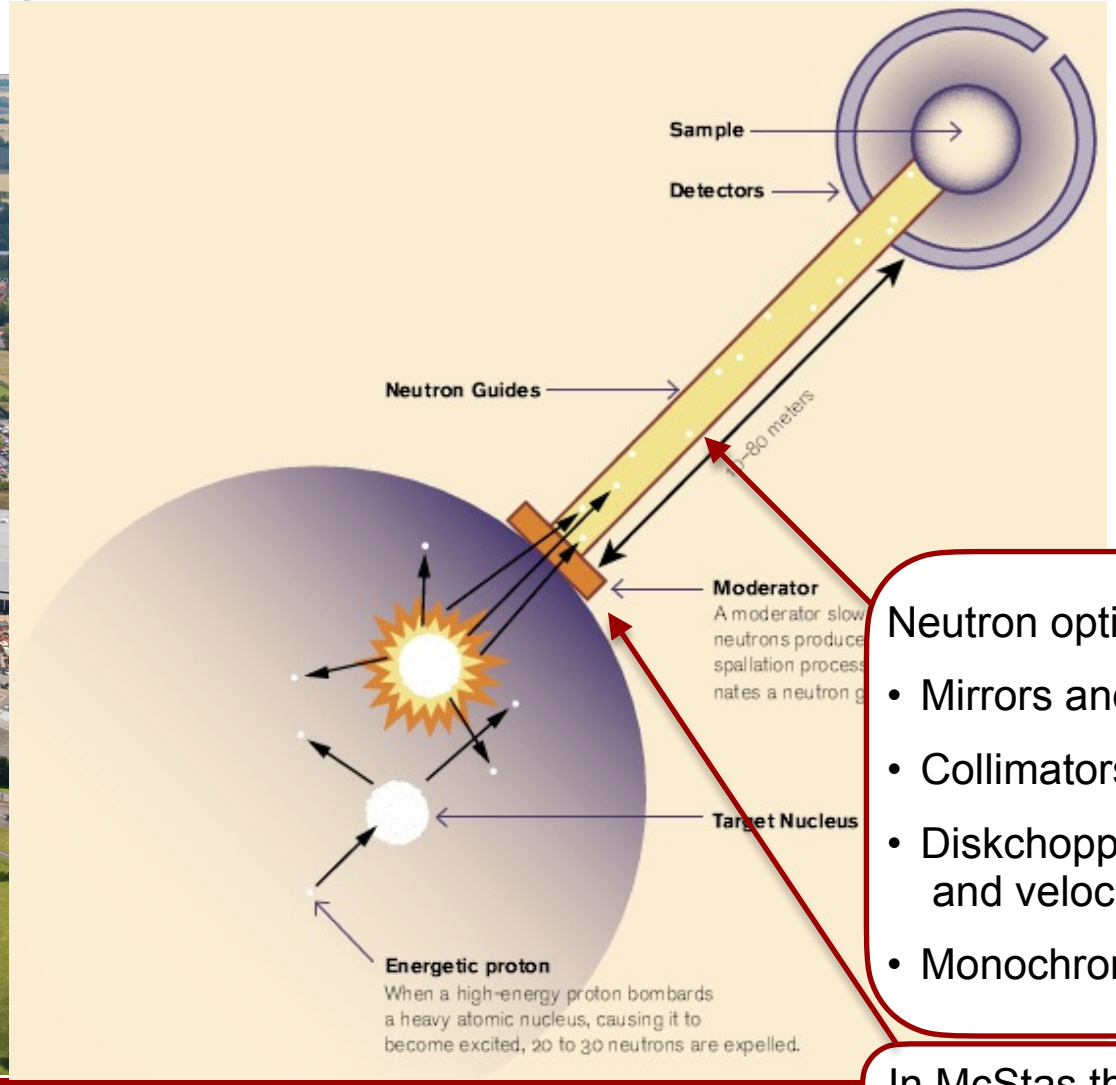


Components of neutron instruments



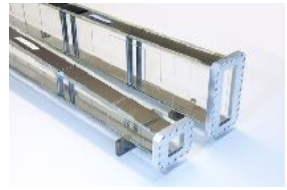
In McStas the moderator is the “source”

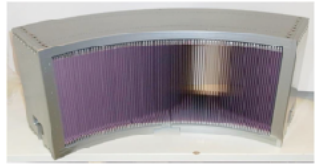
Components of neutron instruments

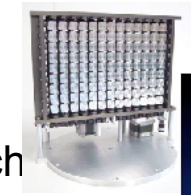


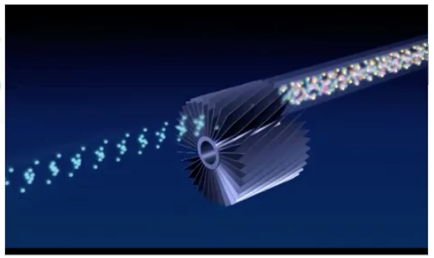
Neutron optics include things like:

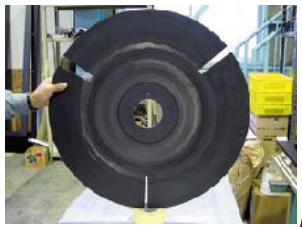
- Mirrors and guides
- Collimators and slits
- Diskchoppers, Fermi ch
  and velocity selectors
- Monochromators/Analysers





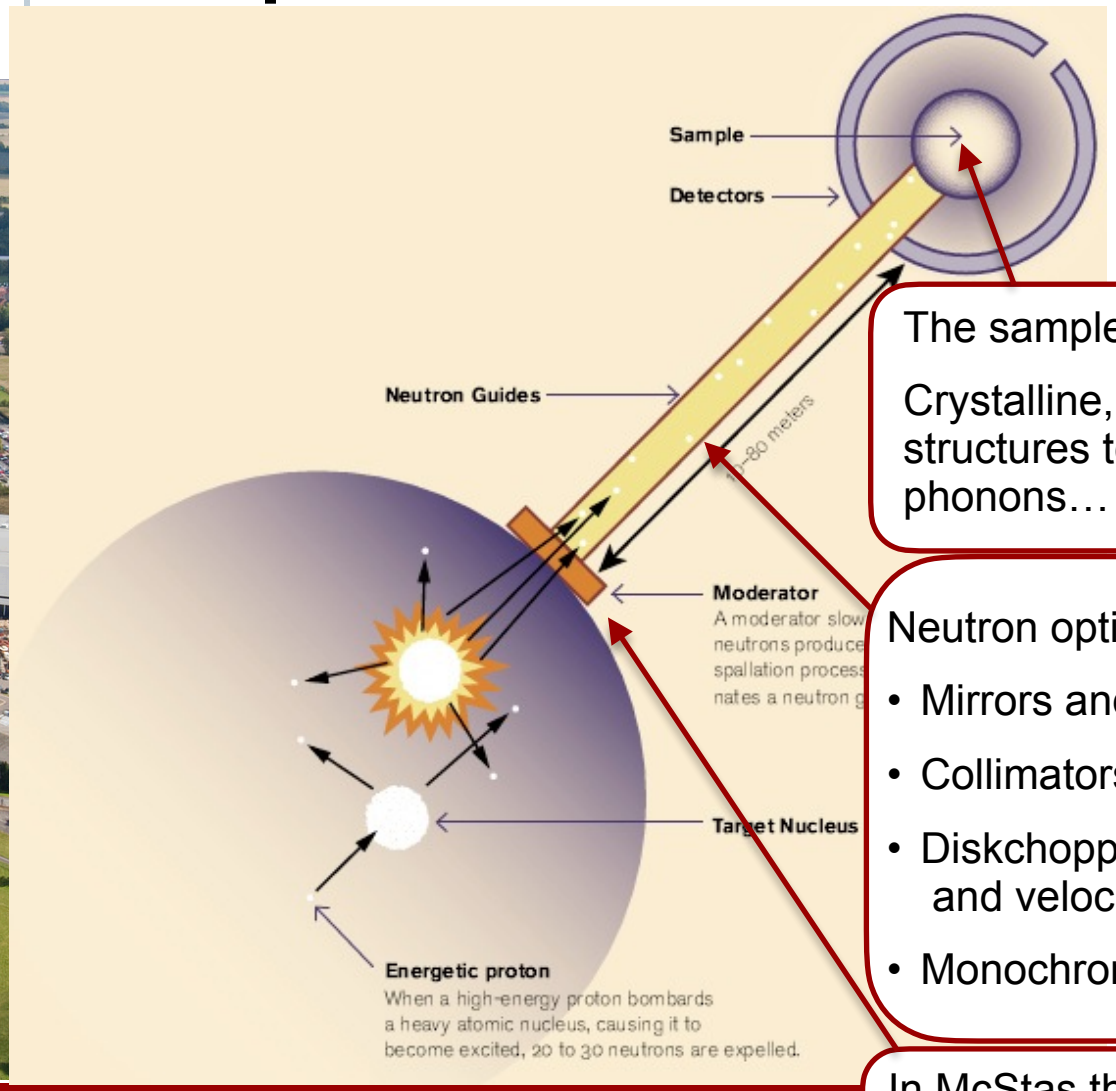






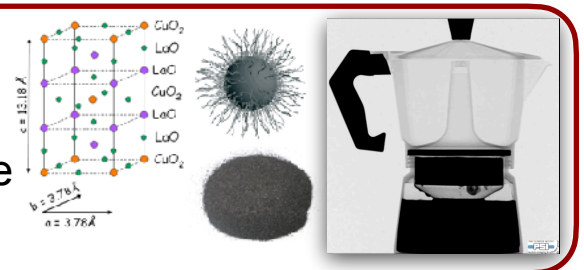
In McStas the moderator is the “source”

Components of neutron instruments



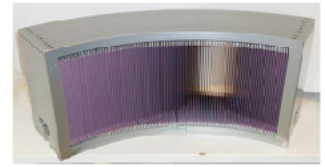
The sample:

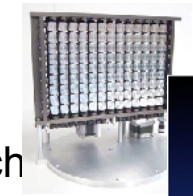
Crystalline, powders, liquids, micelles, structures to image, inelastic features like phonons…

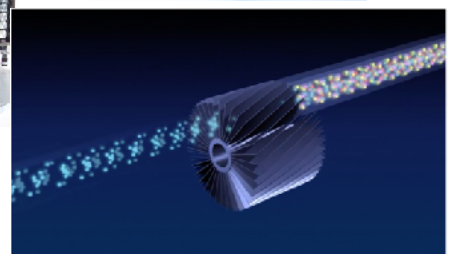


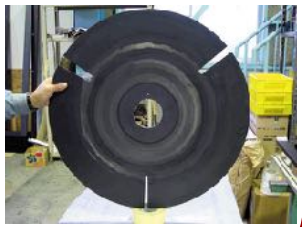
Neutron optics include things like:

- Mirrors and guides
- Collimators and slits
- Diskchoppers, Fermi ch and velocity selectors
- Monochromators/Analysers



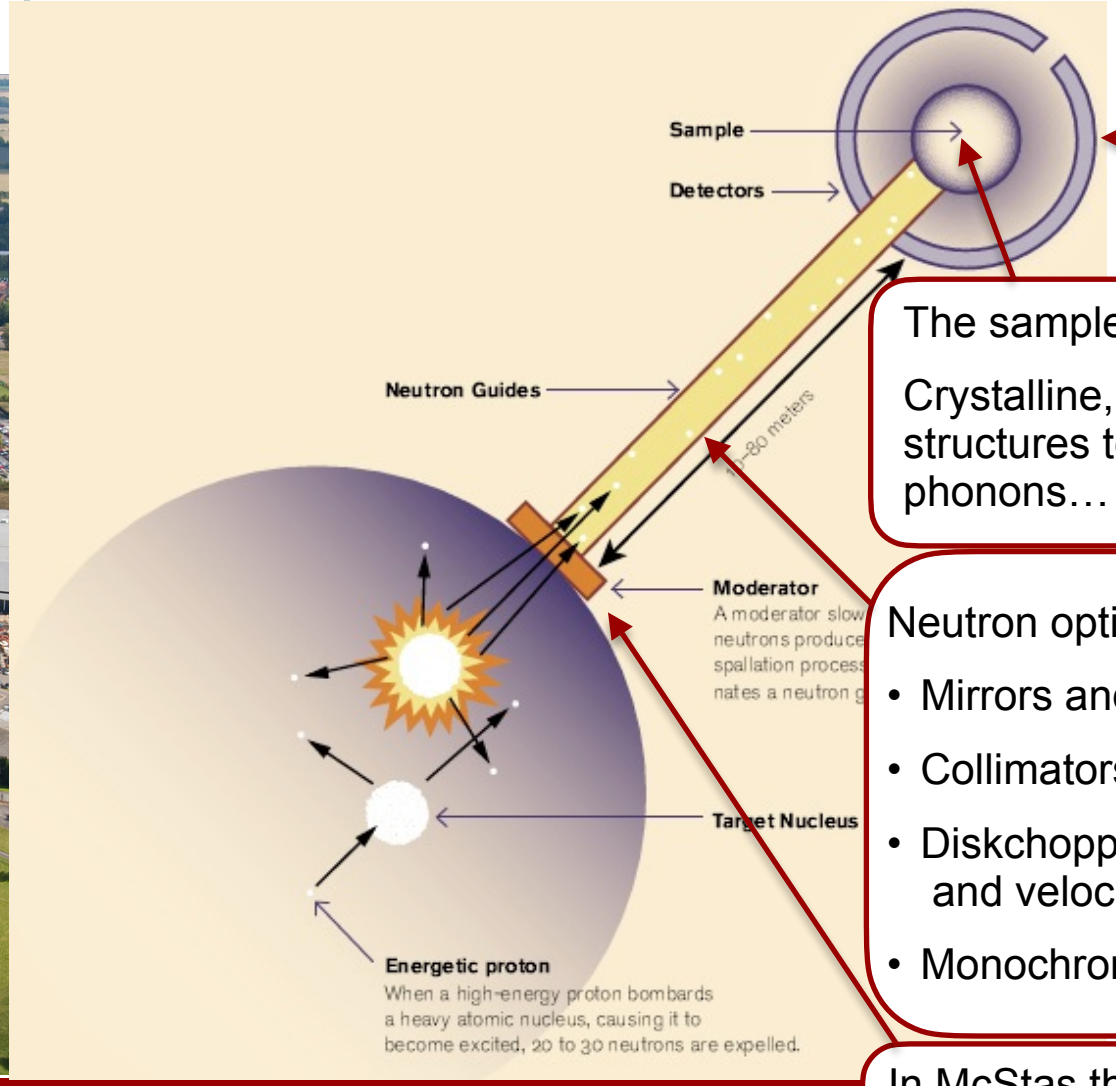




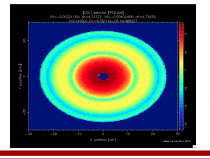


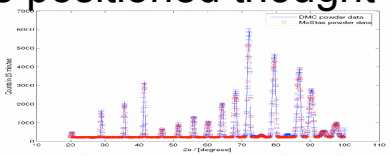
In McStas the moderator is the “source”

Components of neutron instruments



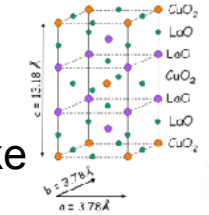
Detectors are “monitors” in McStas. Mostly they act as “perfect probes” and can be positioned thought your instrument gathering 1D/2D/ event lists…

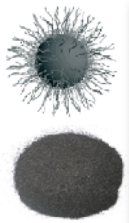




The sample:

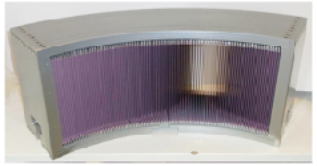
Crystalline, powders, liquids, micelles, structures to image, inelastic features like phonons…

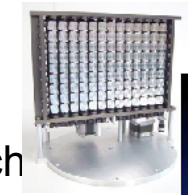


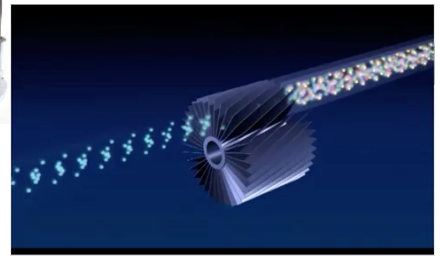


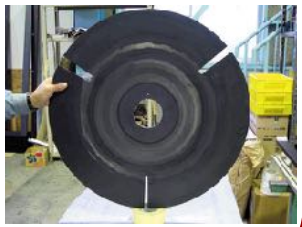
Neutron optics include things like:

- Mirrors and guides
- Collimators and slits
- Diskchoppers, Fermi ch and velocity selectors
- Monochromators/Analysers









In McStas the moderator is the “source”

McStas Introduction

GNU GPL license

Open Source

- Flexible, general simulation utility for neutron scattering experiments.
- Original design for Monte carlo Simulation of triple axis spectrometers
- Developed at DTU Physics, ILL, PSI, Uni CPH, ESS DMSC
- V. 1.0 by K Nielsen & K Lefmann (1998) RISØ
- Currently 2.5+1 people full time plus students

McXtrace [edit]

McXtrace - Monte Carlo Xray ray-tracing is a joint venture by

Risø DTU | ESRF | JJ X-RAY

Funding from NABIIT, DSF and the above parties.

Our code will be based on technology from McStas.

For information on our progress, please subscribe to our user mailinglist.

mailto:webmaster@mcxtrace.org

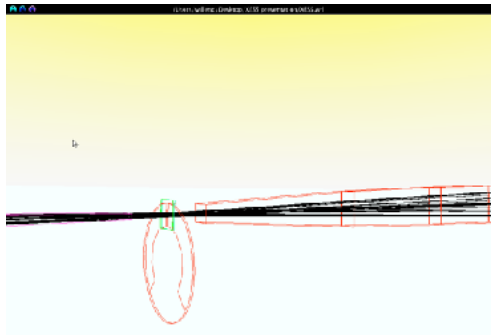
Done

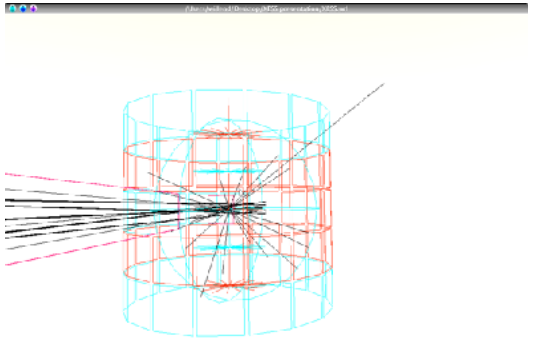
- Synergy, knowledge transfer, shared infrastructure

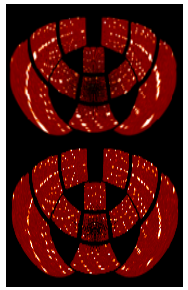
Used in many places

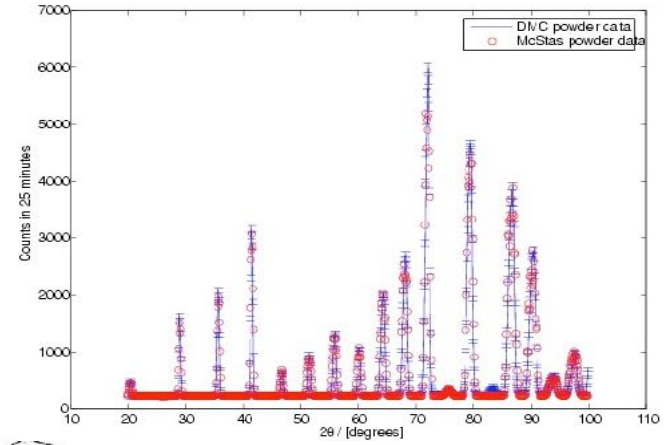
What is McStas used for?

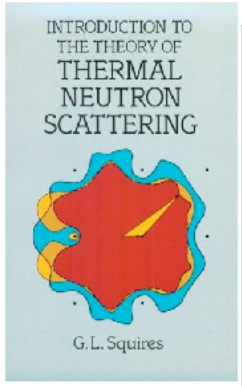
- Instrumentation
- Planning
- Construction
- Virtual experiments
- Data analysis
- Teaching
  (KU, DTU)

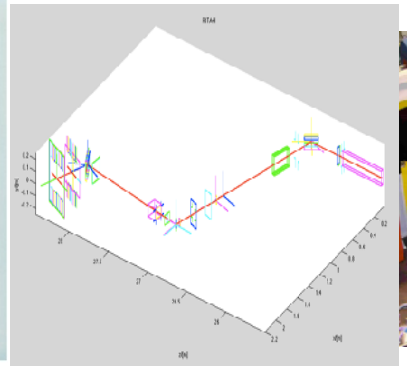


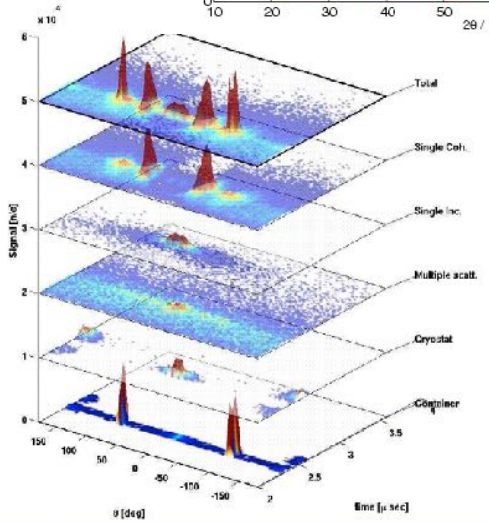






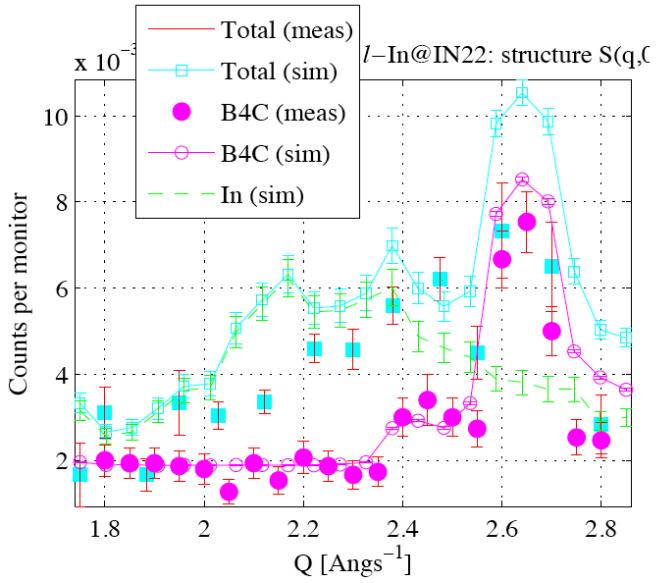




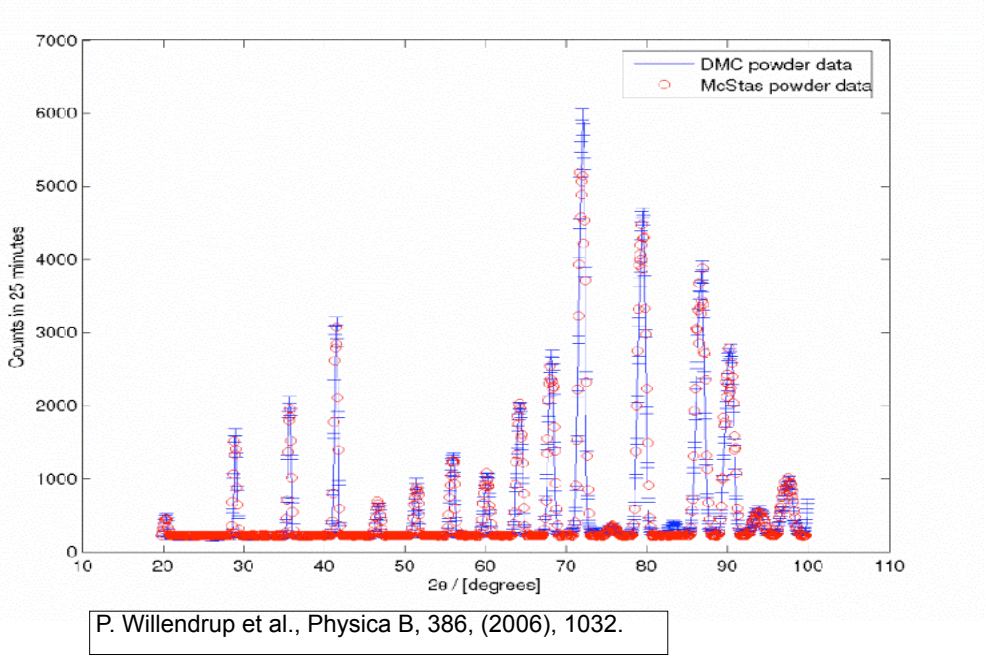


Reliability - cross comparisons

- Much effort has gone into this
- Here: simulations vs. exp. at powder diffract. DMC, PSI
- The bottom line is
- McStas agree very well with other packages (NISP, Vitess, IDEAS, RESTRAX, ...)
- Experimental line shapes are within 5%
- Absolute intensities are within 10%
- Common understanding: McStas and similar codes are reliable



E. Farhi, P. Willendrup



P. Willendrup et al., Physica B, 386, (2006), 1032.

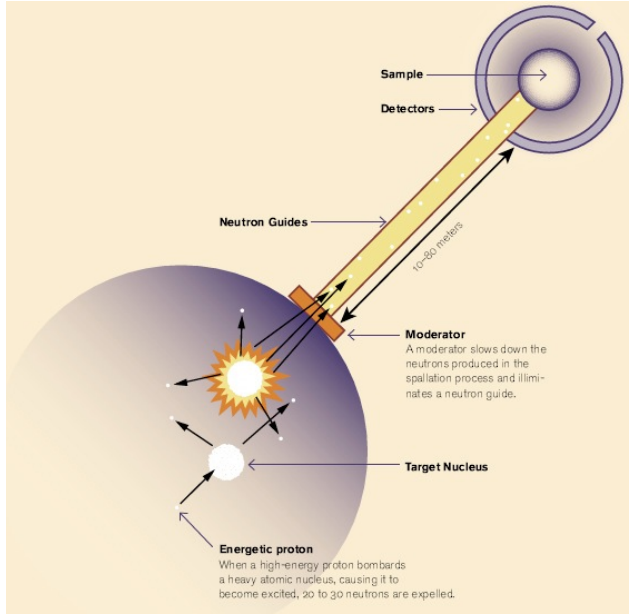
McStas overview

- Portable code (Unix/Linux/Mac/Windoze)

- Ran on everything from iPhone to 1000+ node cluster!

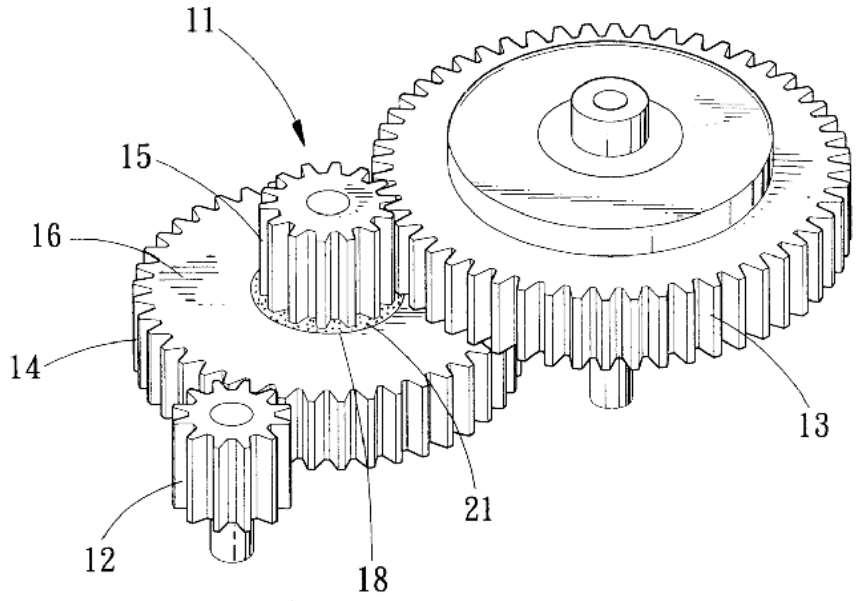
- 'Component' files (~100) inserted from library
  - Sources
  - Optics
  - Samples
  - Monitors
  - If needed, write your own comps

- DSL + ISO-C code gen.



Under-the-hood / inner workings

- Domain-specific-language (DSL) based on compiler technology (LeX+Yacc)
  - Simple Instrument language —Code generation→ ISO C
- Component codes realizing beamline parts (including user contribs)
- Library of common functions for e.g.
  - I/O
  - Random numbers
  - Physical constants
  - Propagation
  - Precession in fields
  - ...



Implementation

- Three levels of source code:
  - Instrument file (All users)
  - Component files (Some users)
  - ANSI c code (no users)

Instrument file

```
DEFINE INSTRUMENT My_Instrument(DIST=10)

/* Here comes the TRACE section, where the actual      */
/* instrument is defined as a sequence of components.  */
TRACE

/* The Arm() class component defines reference points and orientations  */
/* in 3D space.                                                         */
COMPONENT Origin = Arm()
  AT (0,0,0) ABSOLUTE

COMPONENT Source = Source_simple(
    radius = 0.1, dist = 10, xw = 0.1, yh = 0.1, E0 = 5, dE = 1)
  AT (0, 0, 0) RELATIVE Origin

COMPONENT Emon = E_monitor(
    filename = "Emon.dat", xmin = -0.1, xmax = 0.1, ymin = -0.1,
    ymax = 0.1, Emin = 0, Emax = 10)
  AT (0, 0, DIST) RELATIVE Origin

COMPONENT PSD = PSD_monitor(
    nx = 128, ny = 128, filename = "PSD.dat", xmin = -0.1,
    xmax = 0.1, ymin = -0.1, ymax = 0.1)
  AT (0, 0, 1e-10) RELATIVE Emon

/* The END token marks the instrument definition end */
END
```

*
* %I
* Written by: Kim Lefmann
* Date: October 30, 1997
* Modified by: KL, October 4, 2001
* Modified by: Emmanuel Farhi, October 30, 2001. Serious bug corrected.
* Version: $Revision: 1.22 $
* Origin: Risoe
* Release: McStas 1.6
*
* A circular neutron source with flat energy spectrum and arbitrary flux
*
* %D
* The routine is a circular neutron source, which aims at a square target
* centered at the beam (in order to improve MC-acceptance rate).  The angular
* divergence is then given by the dimensions of the target.
* The neutron energy is uniformly distributed between E0-dE and E0+dE.
*
* Example: Source_flat(radius=0.1, dist=2, xw=.1, yh=.1, E0=14, dE=2)
*
* %P
* radius: (m)   Radius of circle in (x,y,0) plane where neutrons
*               are generated.
* dist:   (m)   Distance to target along z axis.
* xw:     (m)   Width(x) of target
* yh:     (m)   Height(y) of target
* E0:     (meV) Mean energy of neutrons.
* dE:     (meV) Energy spread of neutrons.
* Lambda0 (AA)  Mean wavelength of neutrons.
* dLambda (AA)  Wavelength spread of neutrons.
* flux    (1/(s*cm**2*st)) Energy integrated flux
*
* %E
*******************************************************************************/

Written by mcstas!

McStas is a (pre)compiler!

Input is .comp and .instr files + runtime functions for e.g. random numbers

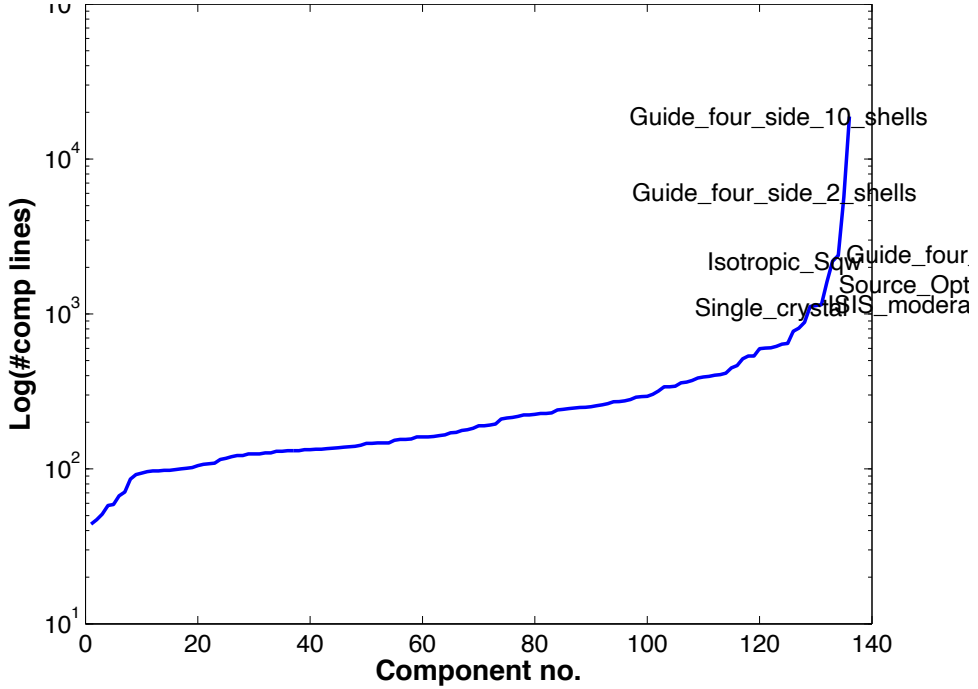
Output is a single c-file, which can be compiled using e.g. gcc.

Can take input arguments if needed.

Writing new comps or understanding existing is not that complex...

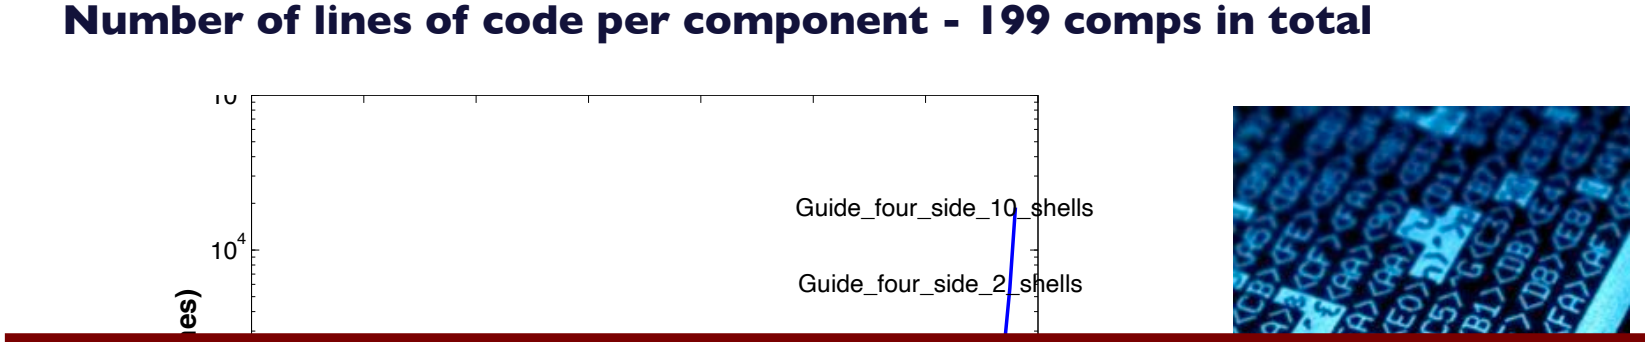
- Check our long list of components and look inside... Most of them are quite simple and short... Statistics:

Number of lines of code per component - 199 comps in total



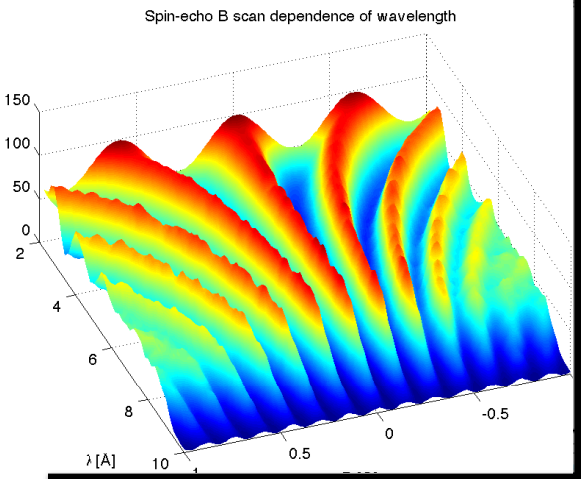
Writing new comps or understanding existing is not that complex...

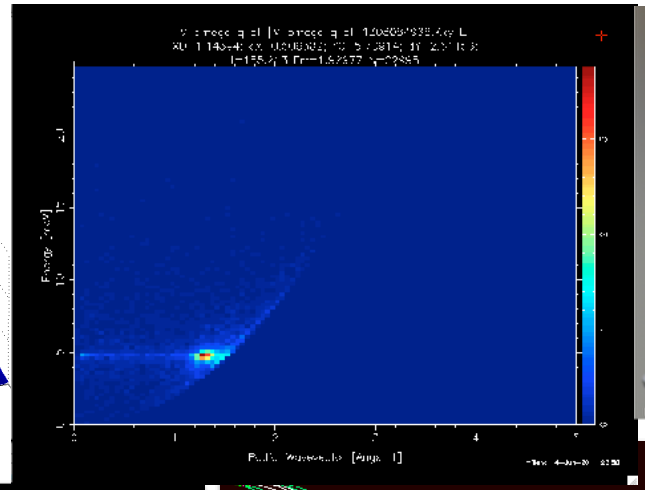
- Check our long list of components and look inside... Most of them are quite simple and short... Statistics:

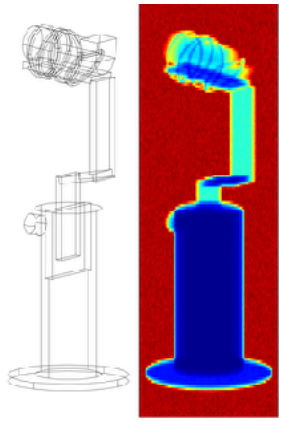


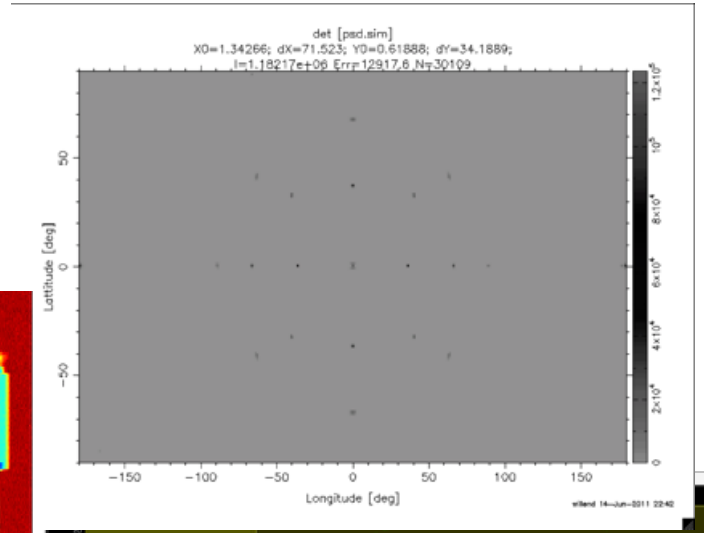
- Well-developed community support
  - –30-40% of existing and new additions are from users
  - –No direct refereeing of the code, but these requirements:
    - –At least one test-instrument
    - –Meaningful documentation headers (in-code docs)
  - –Contributions go in dedicated contrib/ section of library

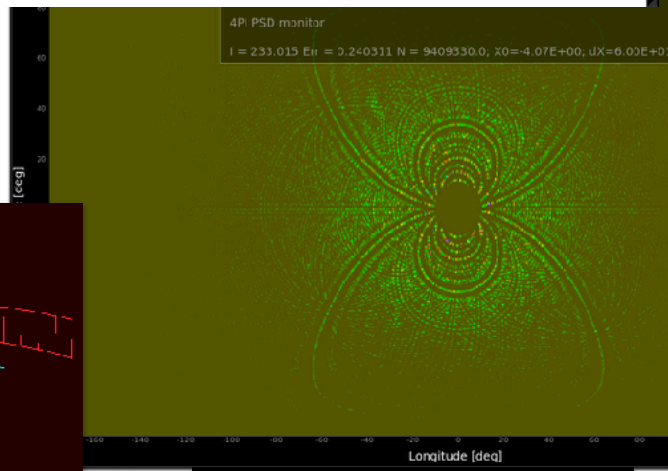
Example suite: ~140 instruments

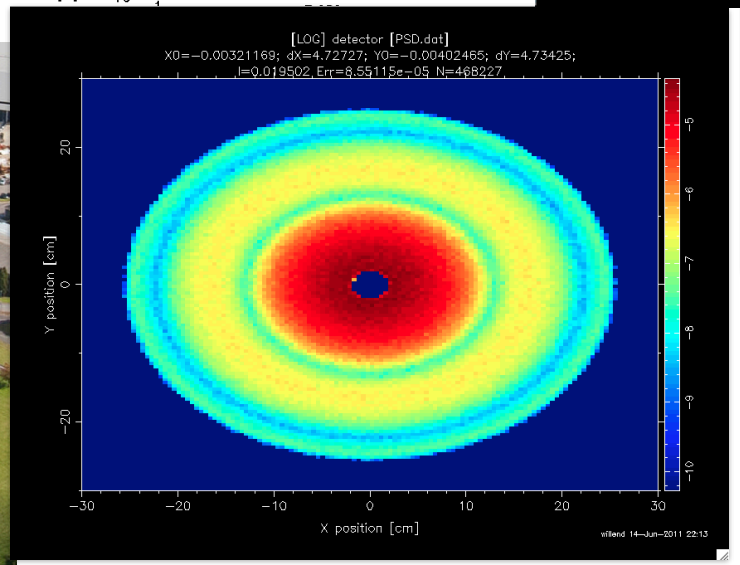


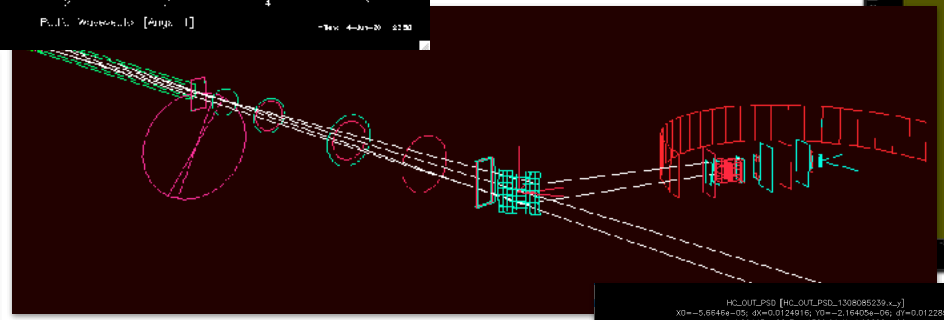


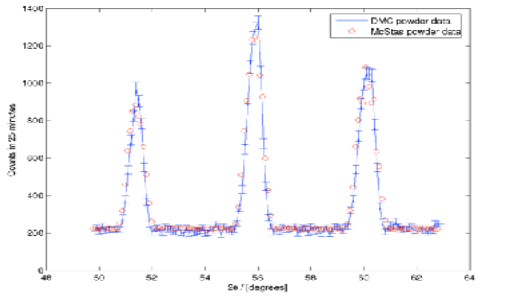


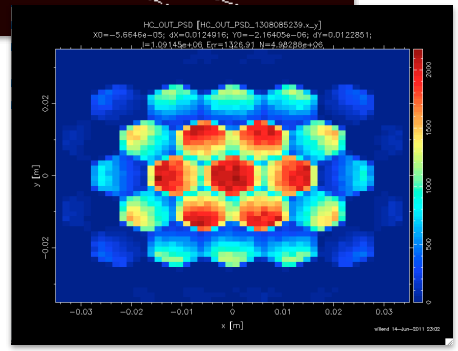


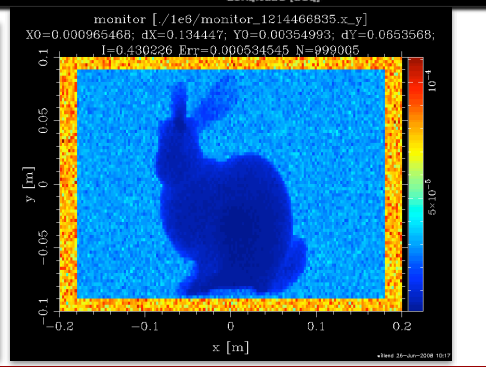












DTU
